ROOTED CUTTINGS

When Ordering Mum Cuttings

Please indicate the earliest date delivery will be acceptable and the maximum number of cuttings that can be handled in a shipment.

Our growers suggest—for the best service and in order to assure delivery of cuttings when you want them—that it is necessary to have your order at least six months in advance of shipping date. Orders on shorter notice will receive the best possible attention. Changes or cancellations must be received at least thirty (30) days before shipment. We suggest that you advise whether substitutions will be acceptable, when giving the order.

Fifty (50) rooted cuttings of a variety is the minimum that can be supplied. More than fifty (50) of a variety must be in multiples of 50.

Shipments will be sent Railway Express unless otherwise instructed.

When shipments arrive in an unsatisfactory condition for any reason—notify your Express Agent at once and have him mark on your express receipt the condition of the shipment or give you a "Joint Inspection Report." Bring claim against delivering company. We hold good order receipt from Transportation Company and cannot be responsible for damage caused by their negligence.

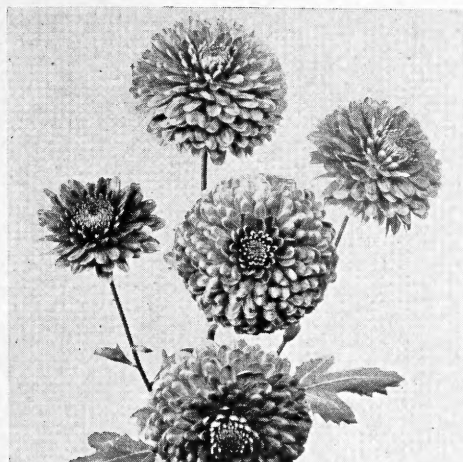

Rooted cuttings delivered before May 1 will set premature buds if night temperature rises to 60 degrees or more. Additional lighting will prevent this. Use 60 watt bulbs spaced 4 feet apart and 30 inches above the plants two to five hours, depending on season. We cannot be responsible when this condition develops.

Use this table to determine quantity prices.

Prices are for the number of one variety ordered, for one specific delivery date and not for the total number of the order.

Off Season Timing

Lights—When flowering varieties out of the natural season by the use of lights and shading the following general rules apply. Varieties are classified 8, 9 etc. week varieties. This is the period of time it takes for them to bloom after short days are started. 8, 9 and 10 week varieties should be lighted from August 1st to May 15th provided plants are grown at 60° minimum, to retard bud formation, 11 week varieties should be lighted August 15th to May 1st. 12, 13 and 14 week varieties should be lighted Sept. 1st to April 15th. Two hours during August is sufficient, increasing one hour each month until five hours in November and December and then diminishing to four hours during January and February, March to three and April to two.

Shading—8, 9 and 10 week varieties must be shaded April 1st to September 15th to insure bud set. 11 week varieties should be shaded March 15th to October 1st and 12, 13 and 14 week varieties should be shaded from March 1st to October 15th.

Example—You want Bonaffon DeLuxe to bloom September 1st. It normally blooms November 20th and is a 11 week variety. Cuttings planted June 1st would be grown natural until June 16th when shading should be started. 11 weeks later it flowers. The same variety is wanted for May 5th. Cuttings are planted January 14th under lights. These are continued until February 18th. Shading should start March 15th. Above dates are for a no-pinch crop. 3 to 4 weeks earlier planting should be figured if pinched.

Will will be glad to send you a schedule for your guidance.

Snapdragon for Greenhouse Forcing

ORIGINATOR'S STRAINS

The rapid turnover of varieties is an indication of the healthy progress being made in developing more profitable varieties that help offset the high cost of production. The use of snapdragons as a catch crop is now more feasible than ever. Unpinched, they can be flowered in 3 to 5 months at 6 x 6" spacing; or grown to a single stem in about the same time, spaced at 4 x 6". Usual spacing is 7 or 8 inches. The vigorous growth of the hybrids makes it possible to produce good cut flower material outdoors under cloth.

THE HYBRIDS

Uniform, free flowering, hybrid vigor, all go to making an article that is profitable to grow. Because of the extra vigor, it is best to be careful that you do not overfeed.

Barbara. Large flowered bronze with a pink throat. Considered by some, the best bronze hybrid. Pkt. **\$3.50**

Better Times. One of the older hybrids. The color of the Better Times rose and the habit of Christmas Cheer ½ Pkt. **\$1.25**; Pkt. **\$2.00**

Christina. Bright pink shade somewhat deeper than Mary Ellen. It is earlier than Mary Ellen and the flowers are larger and more closely spaced Pkt. **\$3.50**

Christmas Cheer. The popular variety which is now the standard rose pink.

Dorcas Jane. Fine soft pink.

Fringed White Snow. Pure, clear white. Best for midseason to late.

Gold Mine. A rich sparkling yellow, much superior in flower, stem and production to the old favorite Ethel. We consider it one of the best yellows.

Gold Rush. Quite similar to the above, except that it is several shades lighter in color. ½ Pkt. **\$2.00**; Pkt. **\$3.50**

Indian Summer. Medium bronze, lighter than Lady Dorothy.

Jubilee. By the introducer of Maryland Pink. A light golden bronze shade with overtones of pink. Has large individual florets and a large full spike. ½ Pkt. **\$2.00**; Pkt. **\$3.50**.

Kathleen. Color similar to Mary Ellen but superior in all other respects. An all season variety, extra vigor makes it possible to use Kathleen with good results for summer flowering. Outstanding for keeping quality. Awarded Gold Medal by both N. Y. and N. J. florist clubs.

Libby. (New) Second early, dark rose pink hybrid with very strong stems and vigorous growth with good sized florets set medium to close on long spikes. Flowers after Mary Ellen. Pkt. **\$3.50**.

Mary Ellen. Popular silvery pink.

Maryland Pink Improved. Longer stronger stems and larger spikes. ½ Pkt. **\$2.00**; Pkt. **\$3.50**.

Maryland White. Quality paper white hybrid, equal in earliness, yield and growth to Maryland Pink. ½ Pkt. **\$2.00**; Pkt. **\$3.50**.

Maxine. Sparkling rose pink. Early.

Mountain Pink. Clear, rose pink similar to Cheviot Maid. Slightly later than Christmas Cheer. Vigorous clean grower.

Patricia. Vigorous yellow. Habit of growth similar to Margaret but blooms earlier. Pkt. **\$3.50**.

Priscilla Ann. New early velvety crimson by the introducer of Christina and Mary Ellen. Pkt. **\$3.50**

Red Wing. Deep velvety red with the true hybrid vigor.

Rockwoods Early Pink. Pastel pink good for the entire season.

Rockwood's Hybrid White No. 5. (New) A clean white for fall or winter bloom. Produces large florets on strong wiry stems.

Sunglow. This was the first bronze hybrid. The color is a golden bronze shade, and it breaks freely.

NEW YODER BROS. HYBRIDS

A series of new hybrids developed by Yoder Bros., Barberton, Ohio. We recommend them to you for trial. Seed will be available early July.

Apollo. Ivory white similar to Margaret but larger flowered and more vigorous.

Twenty Grand. Medium early ivory white.

Jet Pilot. Paper white. Medium early with long spikes. Similar to White Wonder in form but much greater vigor.

Whirlaway. Medium early light pink slightly deeper than Mary Ellen with a long spike of closely spaced large florets.

Star Charter. Rose pink. A wide floret similar to Christina, vigorous uniform growth, close spacing of florets. Excellent keeper.

Pensive. Dark pink. Stronger, cleaner growth than Christmas Cheer and slightly later.

Cavalcade. Deep orange bronze, similar in color to Lady Dorothy; much stronger and more vigorous. Compact floret placement; a little earlier than Barbara.

Day Star. Very early yellow, good uniformity, long spike.

War Admiral. Outstanding vigor, uniformity and spike formation should make this a leading winter flowering yellow.

Prices any of the above hybrid Snapdragons, unless noted — ½ Pkt. **\$1.75**; Pkt. **\$3.00**

SOMERSET'S

Fine Asters

(12,000 seeds per oz.)

Wilt resistant Asters are the result of many years of selection. The disease organism is carried in the soil and persists indefinitely. It is easily spread and may only be destroyed by sterilization. Yellows is spread mainly by leaf hoppers, and, to prevent infection, cloth or greenhouse protection is necessary. Spraying the plants and surrounding vegetation with DDT will help. Seed sown February 15th and lighted, as soon as it comes up, will flower in late June or early July. 6 x 6 spacing for single or double stems is ample.

Florist's Stocks

(19,000 seeds per oz.)

This important cut flower assumes even greater importance as labor and other costs rise. They are best grown in a temperature of 50-60 degrees. Sowing direct into the bench where they are to bloom makes for stronger, more vigorous plants. Rows are usually made 6 inches apart and the plants are thinned to stand approximately 3 inches. Selection of the stronger seedlings will have a tendency to increase the percentage of doubles. Proper feeding with greenhouse Vigoro or Hy-Gro (every two weeks until buds form) will be found beneficial and greatly improves the quality.

SOMERSET'S

Perennial Flower Seeds

There has been a brisk demand for the better perennials during the past few years, and the supply has been inadequate. The cut flower value of some items is considerable, and is often available at a time when other cut flowers are in short supply.

Seed is a cheap and quick way to obtain a stock of many items. Some items are tricky to germinate satisfactorily, but most can be easily raised when sown in early spring, either in the greenhouse or cold frames. Light freezes will not harm most items, and best results are obtained while the weather is cool.

Midsummer sowing is recommended by some authorities, and the seed of many items can be germinated successfully at that time. Greater care, however, is necessary, as weather conditions are less favorable, and under hot humid conditions, results are often unsatisfactory. We shall, at all times, endeavor to give you seed of the best possible strains and viability.

Perennials

Perennials make good cut flowers. Many of them bloom during the Summer and Fall months when greenhouse blooms are in short supply. Others have a special appeal because they are different from the usual. The following are some of the better ones that we recommend for your consideration.

Achillea. The Pearl and Parkers Variety.
Aquilegia. Long Spurred, particularly Snow Queen and Blue Shades.
Aster. Wartburg Star.
Canterbury Bells. Both single and Cup and Saucer.
Centaurea Macrocephala. Very unusual.
Chrysanthemum May Queen and Dieners Giant Double.
Delphinium. Of course, all of them.
Echinops ritro. Unique and showy.
Eryngium planum. Always nice.
Gypsophilla Oldhamiana and Pacifica. The doubles are best but these can be grown from seed.
Heliopsis scabra. Always blooms when flowers are scarce.
Liatris, practically all varieties are tops.
Lunaria, old fashioned but can be tinted for modernistic effects.
Poppies in all varieties.
Physalis Franchetti, always nice for Fall.
Pyrethrum. All varieties.
Scabiosa Caucasica or House's Hybrids.
Statice Dumosa and Latifolia. Nice to dry for Christmas.
Thalictrum magnificum and adiantifolium.
Tritoma Hybrids. Eye catching.

It's Easy To Pot Rose Bushes

GET PREMIUM PRICE — CUT LOSSES

Use No. 2 Cloverset Pots or 7" Bird Paper Pots. Soil should be a mixture of three parts of **any good soil** and **one part of peat or rotted cow manure**. Place about two inches of soil on bottom of pot. Work roots into pot by turning and fill to top with soil. Use hammer handle or cut broom handle to **pack soil firmly**. Refill with soil if necessary and fill pot so there is about two inch space between top of soil and rim. Water thoroughly, **so soil is wet all the way thru**. Place potted plants in a cool frame or any other place where they **will not be exposed to drafts or wind**. Light frost will not harm them. Keep tops moist, maintaining high humidity by spraying lightly. Allow soil to get slightly dry before watering again. This is to encourage vigorous root growth. After plants are well started and growing give increasing amounts of water as needed. Feed with Hygro or other good liquid fertilizer when buds are the size of a pea.
